

POWER-PULSE RSC™ REFLECTIVE SOUND CANCELLATION MUFFLER TECHNOLOGY

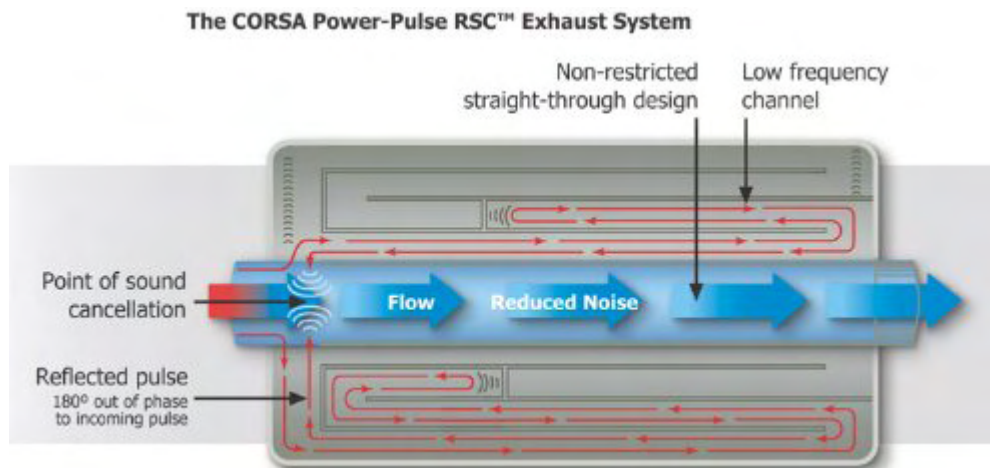

Now you can have the ultimate exhaust performance and sound for your Corvette, without the intrusive in-cabin resonance found in other aftermarket exhaust systems. **CORSA** Performance delivers **The Best Sound Around™** with Power-Pulse RSC™ muffler technology, engineered to increase performance and eliminate annoying interior exhaust noise.

CORSA Redefines Exhaust Technology

The exclusive, patented Power-Pulse RSC™ muffler design delivers the throaty exhaust tones that define your performance Corvette on the open road. But inside, you will experience the quiet ride, that until now, you've only dreamed about.

CORSA has now made it possible with RSC - Reflective Sound Cancellation technology - using aeronautical and space age noise-suppression technology. Sound waves are reflected within the muffler case, producing a cancellation wave effect - with no flow restriction and without electronic devices!

The Power-Pulse RSC™ muffler design features a pipe running straight through the muffler that incorporates a full 360-degree air gap that allows sound pressure waves to escape. The waves are channeled and then returned to the gap 180 degrees out of phase, cancelling specific sound frequencies. All that remains is the clean, crisp sound of V-8 performance.
